

How to Administer Mifegymiso

MIFE = mifepristone
MISO = misoprostol
h = hours
d = days

1 MIFEPRISTONE (MIFE)

The patient should take **MIFE 200mg** orally on a day agreed by the patient and the prescriber.

If **vomiting** occurs < 1 h after taking MIFE, contact the prescriber or pharmacist.

2 MISOPROSTOL (MISO)

The patient should take a dose of **MISO 800mcg** buccally or vaginally 24-48 h after taking MIFE.

Always take MISO, even if bleeding starts following MIFE administration.

If MISO is **forgotten** and > 48 h have passed since MIFE: **take MISO right away and inform the prescriber at follow-up.**

MISO administration

Note: Depending on clinical experience, providers may prescribe a **second dose of MISO** for patients:

- with **gestational age over 63 days** to increase the effectiveness of the regimen.
- who experience **no bleeding within the first 24 h** after the first dose of MISO.
